Maintain documentation of ongoing competence/job performance.	Perform job duties/tasks as assigned seeking clarification from RN school nurse as needed. Schedule time for observation by RN School Nurse. Provide evidence of ongoing work for performance review.
---	---	---

ELC funding for additional staff can be used to hire an RN, LPN, or other Unlicensed Assistive Personnel or UAP in the traditional and charter public school setting. Many schools already hire a registered nurse (RN) as the school nurse. Full-time RN coverage must be in place before consideration can be given to hiring an LPN or UAP. Nursing teams may also include additional registered nurses, licensed practical nurses (LPN), or unlicensed assistive personnel (UAP) as supporting team members. The UAP can be a certified nursing assistant, medical office assistant or a teacher's assistant hired expressly for ELC purposes.

Some agencies can hire these temporary, time-limited staff directly, while others may need to contract these positions through a healthcare staffing agency. The guidelines above are intended to describe the differences between the two hiring mechanisms but are not an exhaustive list.

Charter schools that do not have an RN will need to use these funds to provide full time RN coverage when implementing COVID testing. Other school health programs should assess individual program needs and determine which staffing combination will best serve their purposes.

ELC staff will primarily support COVID testing in the school. However, they may perform additional activities as time allows to support other COVID directed work and the overall school health program.

Additional items have been developed to aid with the creation of job descriptions and training needs of the RN school nurse. (See toolkit.)
